PROFILE

AI Engineer with an MSc by Research in Computer Science, specialising in production LLM systems for regulated enterprise environments. Experienced in multi-agent orchestration, RAG pipelines and model evaluation. Research background in vision-language models for medical imaging.

SKILLS

Languages: Python, SQL

Generative AI: LangChain, LangGraph, RAG, Pydantic, LLM evaluation

Data: PostgreSQL, MongoDB, embeddings and vector retrieval

Backend: FastAPI, Gradio

Cloud & DevOps: Azure, Docker, OpenShift, Git

ML & Research: PyTorch, Hugging Face, vision-language models

Spoken: Greek (native), English (C2)

WORK EXPERIENCE

AI Engineer · Agile Actors 2024 – Present

- Built and shipped a production multi-agent assistant that converts natural language into SQL queries over a relational database.
- Designed an LLM-as-judge evaluation pipeline to measure and track SQL generation accuracy.
- Implemented security guardrails for the system, including SQL validation, prompt hardening and attack monitoring.
- Developed a pipeline converting unstructured Word documents into structured Markdown using Azure Document Intelligence and GPT-4o.
- Deployed and operated containerised services on OpenShift, including incident diagnosis and resolution.

NLP Researcher · Athens University of Economics and Business 2023 – 2024

- Researched diagnostic captioning with multimodal large language models for medical images.
- Used retrieval-augmented generation and prompt engineering to improve caption relevance and accuracy.

Junior Full Stack Engineer · HOMI Greece 2022 – 2023

- Built and deployed classification and regression models on AWS SageMaker.
- Developed REST APIs in FastAPI over PostgreSQL and MongoDB, with React front-ends.

EDUCATION

MSc by Research, Computer Science · Athens University of Economics and Business 2023 – 2024

- Research focus: vision-language models for medical image captioning.

BSc in Informatics · Athens University of Economics and Business 2018 – 2022
